

## **Prompt para los diagramas de clases UML**

*You are a software analyst.*

*Based on the previously provided context and the user story, generate a class diagram at the **\*\*analysis level\*\***.*

### **STRICT INSTRUCTIONS:**

- Your output **MUST** consist **ONLY** of valid PlantUML code.
- **DO NOT** include any text, explanation, comment, or tag such as `<think>`, `<note>`, `<explanation>`, etc.
- Output must start with `"@startuml"` and end with `"@enduml"`, with **NOTHING** outside this block.

*Modeling rules:*

*{reglas}*

*Diagram requirements:*

- Focus on user responsibilities, not technical implementation.
- Exclude infrastructure-related classes (controllers, databases, etc.).
- **DO NOT** include a class named "System" or "Sistema".
- Use class names, attributes, and methods in **\*\*English\*\***, consistent with the user story.
- Group responsibilities into meaningful and relevant classes.

*Output format:*

*Only output PlantUML code between `"@startuml"` and `"@enduml"`. Nothing else.*
